

TRAINING · WEEK 1 · DOC 04

Week 1

Onboarding Pack

Set up your creator identity and understand the network. Your link is already live — you are publishing this week.

Identify
yourself.

Week 1 of 3 · Two tasks: publish your introduction post, and get the product clear enough to talk about it. Features described here must be verified against the live product before you post.

00

You are already live

This is the part that differs from every other creator programme. Your referral slug and dashboard were issued at approval, not at product launch. Nothing in your first six weeks is waiting on V2.

ALREADY DONE**Your slug**

Permanent, yours, live now. Anyone who joins through it is credited to you from day one.

ALREADY DONE**Your dashboard**

Clicks, signups, earnings and network growth, from the moment you were approved.

THIS WEEK**Your introduction post**

Tell your existing audience you are building something. You do not need a product to do this, and you do not need to wait.

THIS WEEK**Product understanding**

Use your creator access so that when you do talk about UNIUI, you are credible.

THE ONLY RULE FOR THIS WEEK

Post about the journey, not the product. “I have just joined a network of 500 student creators” is true, interesting and safe. “I am promoting an AI app” is neither.

01

What is UNIUI?

An AI academic platform for Nigerian university students. UNIUI is designed to help students ask academic questions, work with course materials and study with more context. The core idea in one line: course-grounded learning, built for Nigerian campuses.

SAY IT NATURALLY

“UNIUI helps me work through academic questions with my course context in view.” Use wording that reflects your own experience. Do not imply that every feature or release is available today.

02

The student problem

Every creator in this program is solving the same problem for the same audience. If you can name it accurately, your content writes itself.

PROBLEM**Fragmented search**

Answers take time to find. Students can spend hours searching across chats, folders and general web results.

PROBLEM**Scattered material**

Past questions get buried in shared files and hard-to-search folders, so the useful paper is the one nobody can locate.

PROBLEM**Missing context**

A broad answer may not reflect a student's actual course materials or semester, which is usually what they needed.

PROBLEM**Trust deficit**

Students have been burned by AI tools that sound confident and are simply wrong. Showing sources is the differentiator.

03

How UNIUI is designed to help

Four steps in the intended student workflow. Use these as the backbone of your Week 1 content.

STEP 01**Ask**

Ask an academic question in the context of the material actually available to you.

STEP 02**Verify**

Review cited source material and confidence cues where the product provides them.

STEP 03**Organize**

Find course notes and past-question resources where available.

STEP 04**Practise**

Use study routines or streak features only where available in the current release.

04

Feature tour

Four illustrative concepts. These are concept mockups built from the program brief, not product screenshots. Availability, labels and release status must be checked against the current UNIUI product before you post.

01 · ASK**Ask a question**

Course context · BIO 201 — “Help me understand today's lecture.” Add your own question before asking.

02 · CHECK**Answer with sources**

Answer confidence · review. Source: uploaded lecture notes, section 3. Open the source and check the fit.

03 · FIND**Past questions**

Course · BIO 201. Topic: cell biology · Year: 2024. Filter course material where available.

04 · PRACTISE**Study routine**

A short review session for today. Streak and reward details depend on release.

YOUR WEEK 1 TASK — TWO PARTS

Part one, publish: post your introduction to the network. Part two, prepare: use your creator access and ask three genuine academic questions. Save a screenshot only if the product and your account permit it, and remove private information before sharing. Post in the group: “This is what I found.”

05

What makes a good Week 1 post

You are not selling anything yet. You are establishing that you actually used the product, which is what makes everything you post later credible.

DO**Be specific**

Name the course and the concept. “BIO 201 cell biology” beats “my coursework.”

DO**Show the honest result**

Include what was clear, what was useful, and what you would verify yourself.

DO**Admit limits early**

Saying “I still checked this against my notes” builds more trust than a flawless demo.

DON'T**Post a testimonial you did not write**

Never copy a quote from another creator, even one that sounds like you.

DON'T**Expose private material**

No grades, student IDs, unpublished exam content, or any screenshot showing another person.

DON'T**Claim grades**

Never say UNIUI guarantees anything. See the Approved Claims guide.

06

Week 1 checklist

UNDERSTAND — BEFORE YOU TALK ABOUT IT

- ☐ I can explain what UNIUI is in one sentence.
- ☐ I know which features I personally tried.
- ☐ I can distinguish available features from concepts or planned features.
- ☐ I can name the student problem in my own words.

EXPERIENCE — WHEN YOU TRY UNIUI

- ☐ I asked three real academic questions.
- ☐ I checked any source shown against the answer.
- ☐ I noted what was clear, useful, uncertain or missing.
- ☐ I recorded which features existed in my account today.

SHARE — BEFORE POSTING

- ☐ I removed names, student IDs and private course content.
- ☐ I labelled any concept visuals as illustrative.
- ☐ I disclosed that I am a UNIUI creator.
- ☐ I asked the group about anything I was unsure of.

GROUP POST PROMPT

"I tried UNIUI for [course/topic]. I asked [general question]. What stood out was [your honest observation]. I'm a UNIUI creator, and this is my experience."

Do not post grades, private student data, unpublished exam material, or screenshots that expose another person's information.

07

Questions creators actually get asked

Prepare your honest answer to each of these in Week 1. Being caught off guard with a hard question on camera is how creators end up overclaiming.

Q**Is it accurate?**

It gives answers with sources, so you can check it. I check anything important against the source it shows.

Q**Will this get me an A?**

No tool guarantees a grade. I use it to understand a topic faster, then I still read my course materials.

Q**Does it do my assignment?**

No. It helps me understand concepts. The submitted work is mine.

Q**Is it free?**

Check the current offer before answering this — it changes. If you are not sure, say so.

Q**Which courses does it cover?**

It works with material you provide, so the useful part is what you upload. Describe what you actually did.

Q**Does my school endorse it?**

No, unless we have said so publicly. Do not imply school endorsement.

WHEN YOU DO NOT KNOW

“I’m not sure about that — I’ll check and come back to you” is a complete, credible answer. Guessing on camera is how a good creator becomes a risky one.
