

TRAINING · WEEK 2 · DOC 05

Week 2

Demonstration Guide

Make the value visible in under 60 seconds, and make it obvious that you tested it yourself.

Show the product
honestly.

Week 2 of 3 · Ends with one demo video posted in the creator group for feedback. Feedback is for improvement, not a requirement to publish.

01

Choose a demo format

Pick the format that feels natural to you. All three are equally acceptable; consistency with your existing content matters more.

FORMAT 01**Screen recording + voiceover**

Capture the relevant product flow, then narrate what you tried and what you noticed. Keep the screen legible and hide private details.

FORMAT 02**Face-to-camera + screen**

Open with your real question or reaction, then show the relevant screen. Make clear what you personally tested.

FORMAT 03**Text overlay + screen**

Use a short on-screen question or observation, then show the flow. Keep every claim accurate and readable.

THE STANDARD

A good demo helps another student understand one thing UNIUI can do. It does not promise grades, replace learning, or pretend a planned feature is already live.

02

Build a clear 60-second demo

A simple rhythm, not a script. Timings are guidance — if your hook needs twelve seconds, take twelve seconds.

OPEN 0-5 sec · The hook

Name a real course question, study moment or curiosity. Avoid exaggerated “miracle” language.

CONTEXT 5-15 sec · The context

Say what you are testing and why it matters to your study session right now.

DEMO 15-40 sec · The product

Show the actual flow you used. Pause on the answer and on any source or confidence cue that is genuinely available.

REACT 40-52 sec · Your reaction

Share one honest observation: useful, surprising, unclear, or something you would double-check.

DISCLOSE 52-60 sec · Close

Invite viewers to learn more, disclose your creator relationship, and use the approved tag.

Hooks to adapt

HOOK**“I asked UNIUI my hardest question...”**

Only use it if it truly was a challenging question for your course.

HOOK**“Can AI actually answer this?”**

Show what happened, including uncertainty or a limitation. This hook performs well because the honest answer is interesting.

HOOK**“Testing this AI on my coursework”**

Do not show private assignment instructions or submit AI output as your own work.

HOOK**“Three things UNIUI got right that I didn't expect”**

Keep each point specific to your actual test, or do not use it.

HOOK**“If you're a [course] student, watch this”**

Use a course-relevant question and avoid implying official school endorsement.

HOOK**“I was wrong about this AI tool”**

Only if you genuinely were. A correction is more credible than a recommendation.

03

Quality check

Run this before you send anything. It takes about thirty seconds and catches almost every reason a demo gets pulled.

PREP — BEFORE YOU RECORD

- ☐ I chose a real question I am comfortable sharing.
- ☐ I checked whether the product is available and the feature is live.
- ☐ I used my own account and removed personal or confidential data.
- ☐ I recorded somewhere quiet and well-lit with clear audio.

CAPTURE — WHILE YOU RECORD

- ☐ I kept the key screen visible and readable.
- ☐ I reacted naturally and did not manufacture surprise.
- ☐ I showed sources or confidence cues only if they appeared in my actual session.
- ☐ I kept the final cut under 60 seconds.

REVIEW — BEFORE YOU SEND

- ☐ I checked every factual claim against the product.
- ☐ I added “I'm a UNIUI creator” or #UniUICreator.
- ☐ I tagged @UniUI where appropriate.
- ☐ I asked the group if anything feels uncertain.

YOUR WEEK 2 TASK

Record one demo video and post it in the creator group for feedback. Include: the question you tested, what happened, one genuine reaction, and your disclosure. Feedback is for improvement — it is not a requirement to publish every draft.

ACADEMIC INTEGRITY

Never frame UNIUI as doing a student's assignment. Follow your institution's academic-integrity rules. Submitting AI output as your own work is a violation at almost every Nigerian university, and it puts your account — not just your commission — at risk.

04

Common failure modes

These are the five reasons demos get rejected in the group. None of them are about production quality.

FAILURE**The 30-second feature tour**

You showed everything instead of one thing. A viewer remembers one idea, not a tour of a product.

FAILURE**The unverified claim**

You said a feature was live because you saw it in a mockup. Check the live product or drop the claim.

FAILURE**The manufactured reaction**

Your face performs surprise you did not feel. Viewers read this instantly and stop trusting the rest of the post.

FAILURE**The unreadable screen**

The key text is too small to read on a phone. Zoom in, or crop to the one element that matters.

FAILURE**The buried disclosure**

#UniUICreator is hidden at the end under twelve other hashtags. Put it where it is readable.

FAILURE**The missing next step**

The video ends without telling anyone what to do. Close with one clear action.

05

Captions, titles and thumbnails

The demo is only half the post. How it is packaged decides whether anyone reaches the demonstration at all.

DO**Put the question in the title**

“Can AI actually answer this cell biology question?” beats “Study tool recommendation.” Specific questions get clicked.

DO**Write a first comment with detail**

Put your longer explanation, the course context and your disclosure in the first comment so the video reads cleanly.

DO**Use 3 to 5 relevant hashtags**

Mix broad and niche: #studytoknigeria alongside #bio201. Do not stack thirty.

DON'T**Use clickbait you cannot pay off**

If the title promises “I got an A,” the video cannot deliver it honestly, and that is a claim violation.

DON'T**Post the same video everywhere**

Re-edit the caption and hook per platform. Cross-posting identical content reads as automated.

DON'T**Hide the disclosure in the caption**

On TikTok and Instagram, put it in the video itself as well as the caption.
