Week 3

Content Playbook

Campaigns give you a direction, not a script. Your audience already trusts your voice — do not replace it.

Prepare content
that feels real.

Week 3 of 3 · Six campaigns, content rules, and the worksheet for drafting your own ideas before launch.

01

The campaign principle

Start with a useful idea. Tell it in your own voice. Choose a campaign angle that fits your course and your real experience. Make the post useful to another student, show only what you have actually tested, and disclose your creator relationship.

02

The six pre-launch pillars

You start posting before the product exists, so these six pillars are your entire content plan until V2 lands. None of them require a demo, a screenshot or a pitch.

PILLAR 01**The Journey**

“Day 1 as a Founding Creator.” Builds your creator brand and makes the network visible to people already watching you.

PILLAR 02**The Problem**

“Why studying in Nigeria is broken.” Sets up the solution without ever pitching it. This is the pillar that makes launch convert later.

PILLAR 03**The Build**

“What I am building with 500 other creators.” Creates anticipation, and makes joining feel like momentum rather than a job.

PILLAR 04**The Tips**

“3 study hacks I actually use.” Your normal content, with a subtle affiliation to the network. Consistency here compounds fastest.

PILLAR 05**The Network**

“Meet the other Founding Creators.” Cross-promotion, and it grows the network itself while growing your reach.

PILLAR 06**The Countdown**

“Something is coming. Here is what I know.” Anticipation, plus a concrete reason for your audience to keep following you until it drops.

THE RULE UNDERNEATH ALL SIX

Never pitch the product before it exists. Pitch the journey, the problem and your own story. When V2 lands you pivot to product content — into an audience that already trusts you. A creator who spends six weeks pitching something that does not exist loses the only advantage they had: credibility.

04

The six campaigns

Campaigns run from launch onward. You may also run any of these on your own initiative — but you must still follow the content rules and disclose.

CAMPAIGN 01**Meet UNIUI**

Introduce the platform: what it is, who it is designed for, and why you chose to try it. Prompts: “One study problem I want to make easier”; “What course-grounded AI means to me”; “My first impression.”

CAMPAIGN 02**Test UNIUI**

Ask UNIUI a difficult academic question, show the actual answer, and share your honest reaction. Prompts: one concept from a real lecture; a question with a checkable source; what you would verify next.

CAMPAIGN 03**Can AI get this right?**

Explore how confidence cues and sources help you judge an answer. Show both what seems supported and what remains uncertain. Prompts: source check; compare with your notes; show a limitation honestly.

CAMPAIGN 04**My semester with UNIUI**

Document real use over time rather than presenting one interaction as proof of results. Prompts: a weekly study check-in; what changed in your workflow; one thing you still verify manually.

CAMPAIGN 05**UNIUI Challenge**

Create the most useful academic demonstration you can. Keep it fair, course-specific and grounded in real product behaviour. Prompts: explain a tricky idea; a short source-check walkthrough; invite peers to suggest a question.

CAMPAIGN 06**Launch Week**

The coordinated push around the V2 launch. Every active creator posts in the launch window. Briefs and timing are issued by the team; this is the highest visibility campaign of the year.

Campaign brief — fill this in before recording

PLAN**My audience**

Which students or course cohort will find this useful?

PLAN**My point**

What is the one thing a viewer should understand or learn?

PLAN**My proof**

What real product interaction, source or personal observation supports it?

PLAN**My boundary**

What should I avoid claiming, showing or exposing?

05

Content rules

Trust is the campaign. Protect it in every post — a single overclaim costs you more commission than a month of good posts earns.

DO**Use your own voice**

Campaigns are prompts, not scripts. Do not copy a testimonial or claim that does not match your experience.

DO**Disclose clearly**

Every post must include “I’m a UNIUI creator” or #UniUICreator. Tag @UniUI where appropriate.

DO**Show what is real**

Only demonstrate features available to you. Label concept visuals as illustrative and do not present them as a live product screen.

DO**Keep academic integrity**

Do not say UNIUI guarantees grades or does assignments. Do not share confidential assessment material.

DO**Respect people and schools**

Get permission before showing other people. Avoid implying official university endorsement unless approved.

DO**Be constructive**

No competitor claims, fake engagement, spam or fabricated results. Ask the team if a claim is unclear.

YOUR WEEK 3 TASK

Pick two campaigns. Draft three video ideas for each — six ideas in total. For every idea, include the audience, the one-sentence point, the real proof you will show, and your disclosure. Post your ideas in the group for feedback.

06

Idea worksheet

Six starting points for your own concepts. Write in your own words — the point of the worksheet is to get your thinking down, not to produce finished scripts.

DRAFT

Campaign 1 · Idea A

Campaign 1 · Idea B

Campaign 1 · Idea C

DRAFT

Campaign 2 · Idea A

Campaign 2 · Idea B

Campaign 2 · Idea C

BEFORE YOU SUBMIT

Include which two campaigns you chose, your six ideas, one disclosure line, and any product detail you want the team to verify.

07

Posting cadence

Two posts a week during an active campaign is the commitment. Consistency matters more than intensity — a creator who posts reliably at lower frequency out-earns one who posts three times in one week and then disappears.

CADENCE Baseline

Two posts per week while a campaign is active. Pick fixed days so your audience learns when to expect you.

CADENCE Launch week

Post in the launch window. Briefs and timing are issued by the team.

CADENCE Between campaigns

Post when you have something genuinely useful. You are not obligated to post when there is no brief.

CADENCE Minimum for Active status

Two posts per week for four consecutive weeks earns Active status.

08

Reading your own numbers

Views are not what you are paid on. Understanding which numbers actually move your commission stops you optimising for the wrong thing.

METRIC **Clicks**

How many people opened your referral link. High clicks with low signups means your hook over-promises relative to the landing page.

METRIC **Registrations**

How many people created an account. This is the first number that predicts commission.

METRIC **Activated users**

Registered, uploaded material and asked a real question. This is what the leaderboard ranks on.

METRIC **Paying subscribers**

Activated users who subscribe. This is what sets your commission tier.

METRIC **Earnings**

Your accrued commission after the hold period. What you have actually earned versus what is still held.

METRIC **Reach**

Useful for judging content, not for judging income. Do not chase it.

THE HONEST OPTIMISATION

The highest-earning creators are usually not the biggest accounts. They are the ones whose content sets an accurate expectation, so the people who click actually want what they get.
